

## CareWare<sup>®</sup> Hospital Information Management System

has been developed to provide best medical services in patients & Physicians from the Hospital they deal with. Delivering these services requires hospitals to review the way they manage their business processes and supply more efficient features to physicians, patients, and hospitals officials as well as other decision makers.

In order to provide such services, the Health facility must focus on developing a solution to connect all its resources and makes it available to all who needs utilizing it using latest technology. This kind of solution will enhance the performance and optimize the efficiency and will reduce the cost of ownership.

Adaptive TechSoft creates a solution suite that transforms the hospital to a community, allowing the access to all resources and data as needed.

Careware is a comprehensive solution developed specifically for Health facilities in the region. It is flexible, comprehensive, multi-lingual, integrated and secured solution that supports clinical, financial, administration and

higher management needs the integrated Hospital Management System can be sub categorize into the following groups:

- Medical Information System (Administrative and Clinical).
- ERP (Material, financial and Human resources).
- Support Systems.
